Act before smoke appears

What if your building could become more immune to fire caused by cable overheating in the electrical panel?

We're taking fire prevention to the next level with a revolutionary new sensor, unique to the market, that helps building operators to anticipate and act before smoke appears or an electrical fire starts.

Through artificial intelligence algorithms, this sensor continuously analyzes the air inside the panel in real time to detect any cable overheating.

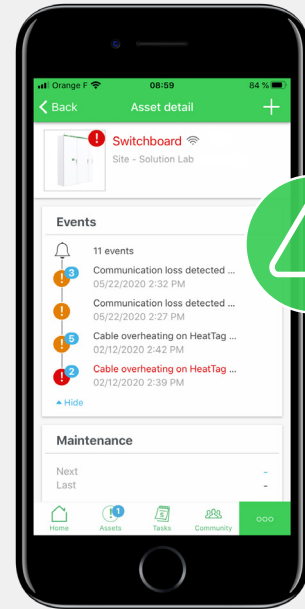

When an anomaly is detected, a notification is instantaneously received by the facility manager.

Scan QR code to start the simple commissioning process

Features

- 3 levels of alerts depending on overheating severity
- Measures ambient temperature and hygrometry
- Provides switchboard air-quality index

24/7 alarms from your electrical panel, no matter where you are, with EcoStruxure Facility Expert.

Continuous monitoring and trends

Detailed dashboard on your smart device:

- Ambient temperature and hygrometry trends
- Switchboard air-quality evolution
- Data storage, asset history, and reports

The best kind of peace of mind lets you take action before issues happen!

Condition-based Maintenance

- Optimize the frequency of your thermal scanning campaigns

Installation

- Easy to install with DIN rail mounting and Zigbee® wireless communication
- Compatible with EcoStruxure™ open IoT platform
- Can be installed on any switchboard without forced ventilation
- Can be integrated into any Building Management System (BMS)
